(a) Gumbel: right skewed
Standard Gumbel
Normal, mean γ_E, variance $\frac{\pi^2}{6}$
mode 0
mean $\gamma_E \approx 0.577$
Density
ε
(b) Logistic: fatter tails
Standard logistic
Normal, variance $\frac{\pi^2}{3}$
log scale, $z > 0$
Density
$z = \varepsilon_1 - \varepsilon_2$
